

Our Products

MichiGrain Potato Vodka: ID 17440-potato

At MichiGrain, we believe in tradition, which is why we make some of our vodka the old way: from potatoes. MichiGrain Potato Vodka is made with fresh potatoes, not dried potato starch, that comes from 100% Michigan-sourced Russet potatoes. Opting to go the environmentally friendly route by using another company's byproduct, we utilize the starch between the skin and the body of the potato to create our handcrafted vodka. Due to a lack of protein in potatoes, potato vodka has a much smoother taste than other vodka varieties. When creating our double distilled and gluten-free potato vodka, we focus on flavor first and yield second by creating the highest standard of spirits cut with deionized water. MichiGrain Potato Vodka has a smooth taste and a traditional vodka flavor which makes it an ideal choice for any occasion.

MichiGrain Corn Vodka: ID 17439-corn

At MichiGrain, we rely on our local farmers to provide us with the best corn they harvest. We source the field sweet corn used to make MichiGrain Corn Vodka from a farmer's co-op in Mason, Michigan. This vodka has a robust taste with a slight bite in the nose, but a very soft end-note. Its earthy notes paired with its touch of grain flavor are experienced in every sip. Throughout our double-distilling process, MichiGrain Corn Vodka gets cut with de-ionized water and undergoes a two-day carbon process for a clean smooth taste. MichiGrain Corn Vodka is the vodka that vodka drinkers seek out.

Our Mission

At MichiGrain, we don't believe in limitations. Our vision to bring our own unique brand of unaged craft to the world of spirits all starts with two very simple goals: make the kind of liquor we want to drink and make a whole lot of it. Typically, when one pictures a distillery that creates the kind of high-quality handcrafted spirits that we produce, they imagine small-batch-level output. Inspired by the population of relentless hard workers from our home in Michigan, we've taken a page straight out of their playbook and put our blood, sweat, and tears into creating a process that proves high volume can actually be handcrafted.
